

DROMEN & DOEN

TO DREAM AND DO

Organize a fashion-show, make a HD-picture of your own DNA or build a working satellite, all within only 4 days. Challenges for the 4th grade of HAVO that seem impossible at first glance, but will prove to be quite feasible, at least with the help of inspiring companies/professionals and HBO-students.

With Dromen & Doen, [Technolab Leiden](#) wants to stimulate entrepreneurship in a broad sense (taking action, risk, ownership) and give the students a platform to actively find out which studies and fields of work might suit their talents and interests. Hopefully they'll be inspired, and be better prepared for the difficult but important choices that lie ahead. We've already been doing something similar since a few years for 5VWO and 3VMBO with [Leren over Leven](#) and [Talent & Toekomst](#).

PROFESSIONALS WANTED

We're still looking for exciting, interesting and inspiring companies, institutions, professionals or projects that can contribute to Dromen & Doen in one way or another. You could for example help by issuing a challenge, or act as an expert that helps a group along with a specific question/problem, or by supplying location or materials.

- Involvement is scalable. From helping design a challenge to meeting and giving advice to a group of students. It could take two half-days, or just an hour.
- The groups that will try to beat the challenges will consist of ca. 6 4HAVO students (15-16yrs.) and will be accompanied by either someone from Technolab or a HBO-student.
- There are two separate weeks of Dromen & Doen coming up, one in week 8 (19-23 feb) and one in week 16 (16-20 apr). We're looking for help with both or either one.

TECHNOLAB LEIDEN

Technolab Leiden is a foundation that inspires young people (4-18yrs) from Leiden and around for Natural Sciences and Technology. Last year we reached around 20.000 students with our workshops and projects, and aside from our young freelancers the ca. 100 interns (MBO, HBO, WO) a year keep things afloat.

Our way of working is DO, experience it yourself and work together, and in almost all our programs we try to link together education and the 'real' world.

That's why we work with a lot of partners in primary, secondary and higher education, but also with businesses, from little start-ups to companies like Dupont and Airbus.
